E-commerce Performance Review |$1.2M Revenue Analysis (2019–2026

Average Revenue

$85.67

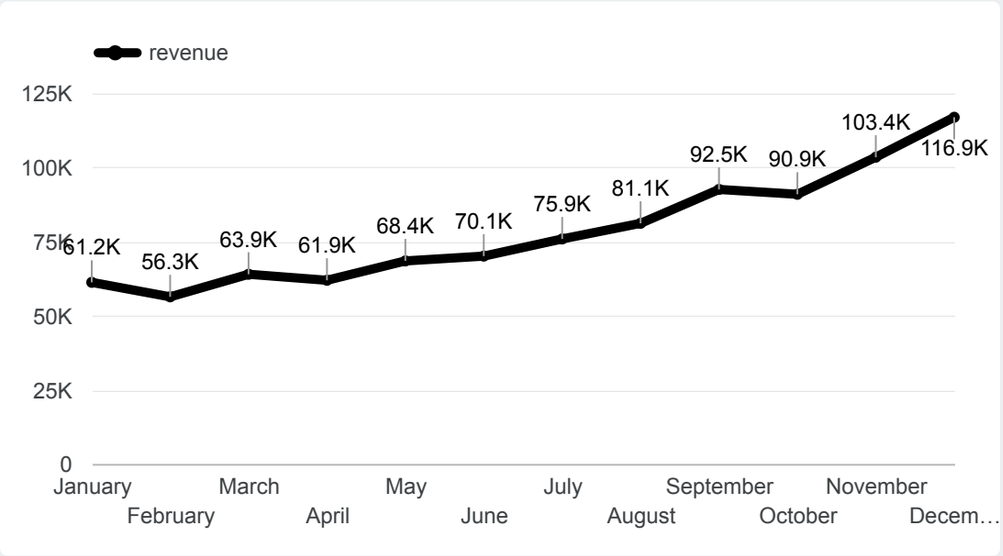
Total Revenue

1.2M

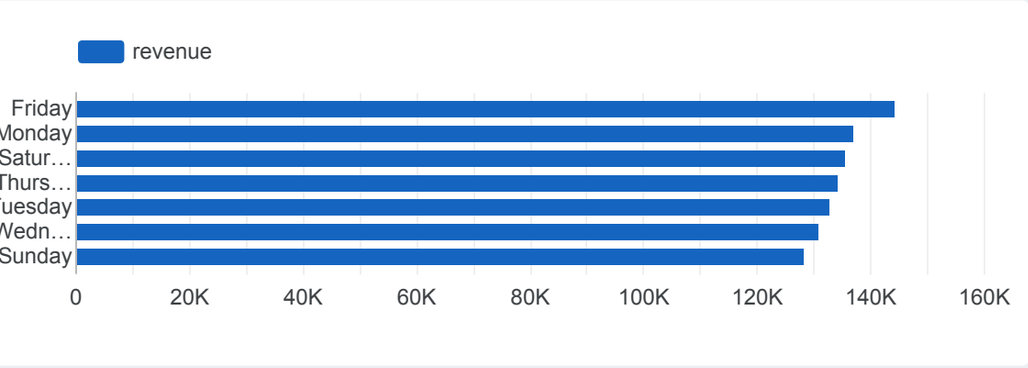
Total Orders

19.6K

Monthly Revenue(2025)



Daily Order Trend



KEY INSIGHTS

Revenue Growth

- Revenue doubled from $60K (Jan) to $120K (Dec)
- 100% YoY growth - Q4 shows strongest performance with consistent $90K+ monthly revenue

September shows a minor revenue dip to $77K before strong Q4 recovery — possible seasonal pattern worth monitoring.

Peak Sales Days

- Wednesday generates highest revenue ($140K total)
- Weekend sales (Sat/Sun) underperform weekdays

Geographic Concentration

- Revenue spans 3 continents with North America and Asia as primary markets

Customer Behavior

- Average order value stable at $83.92

Strategic Actions.

Recommendation 1: Increase ad spend and inventory levels starting in October to capitalize on the 100% YoY growth trend leading into the Q4 peak (December). **Recommendation 2:** Schedule "Flash Sales" or major email marketing blasts for Tuesdays and Wednesdays, as these are your highest revenue-generating days. **Recommendation 3**: Allocate localized marketing budgets to Guangdong and England, as these regions are driving the highest global revenue distribution.

1 - 20 / 20

key insights

Profit vs. Margin — Calvin Klein leads total profit (~$28K) via volume, not pricing power. Carhartt shows stronger margin efficiency. Return Rate Alert — 5 of top 20 products have 50%+ return rates, likely eroding net margin. Investigate sizing and product descriptions.

Fulfillment Gap — Only 25.2% of orders Complete vs 29.8% still Shipped. Aging shipments may signal an operational issue.

Revenue Leakage — 15% cancellations + high returns means ~25% of orders never convert to retained revenue.

Profitability Strategy.

Recommendation 1: Implement a "Root Cause Analysis" on the 15% cancellation rate to determine if the leakage is due to payment failures or shipping delays.

Recommendation 2: Immediately review sizing guides and product photos for the top 20 products with return rates over 50% (like Ray-Ban and Thorlo items) to reduce operational loss.

Recommendation 3: Focus on Outerwear & Coats as your primary profit driver; consider expanding this category's catalog since it dominates the treemap volume.

Customer Growth & Retention

Key Insight

Marketing Quality: While Search brings in the highest volume of total orders, the Average LTV (Lifetime Value) is relatively consistent across channels. This means the "Quality" is stable, but the "Volume" is lopsided. Churn Emergency: The Churn Risk table shows multiple VIP customers (**Top 10% LTV)** who have not placed an order in over 200 to 300 days. High-Risk Channels: Customers acquired through Facebook and Display have the highest average days since last order, suggesting these channels might bring in "one-time buyers" rather than loyal repeat customers.

Growth & Retention Roadmap

Recommendation 1: Launch an automated "Win-Back" campaign for the 2,769 VIP customers who have not placed an order in over 120 days .

Recommendation 2: Shift marketing budget from Facebook/Display toward Search and Organic channels, as they provide more consistent, high-value customer acquisition.

Recommendation 3: Create a "Platinum Tier" loyalty program for your top 10% LTV customers to increase their purchase frequency and prevent them from becoming churn risks
